DETAILED ACTION**Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-36 of U.S.

Patent No. 6,434,090. Although the conflicting claims are not identical, they are not patentably distinct from each other because both set of claims teach an input device comprising: a robotic device responsive to robotic device commands to transport the media items among media locations including media storage bins and multiple media drives; and the multiple media drives, configured to removably receive media items and exchange data therewith, each said drive including at least one host port to receive thereon control signals originating from a host device, said control signals including (1) data exchange commands

Art Unit: 2182

directing an exchange of data with a media item received by the media drive and
(2) the robotic device commands, said drives including: a master media drive
coupled to the robotic device; and the master media drive sends all
robotic device commands received from the host port and the relay media drives
to the robotic device while withholding from the robotic device all data
exchange commands received upon the host port *or* where each media drive forwards
all robotic device commands from its host port directly to the robotic device while
preventing forwarding of data exchange commands.

Allowable Subject Matter

Claims 1-19 are allowed over the prior art. Freeman (US 5,129,076) does not
teach wherein at least one of the robotic media transport device and the drives is
programmed to restrict host access to components of the library according to
predefined logical partitions, each partition defining a different group of one or more of
the following library components; one or more media items, one or more media drives,
one or more media storage locations.
